Setting up Dev environment ;
⎿ u need Code editors : VS Code ,
                              Atom , Sublime Code

as I told u, u need JS Engine which is inside
a browser (or) outside a browser (node)

download node .

→ create-folder, Js-basics drag & drop in VS code
    -take index.html in Practice
       (! tab)

→ go to Extensions, search Liveserver 3-2)
       install

→ Right click on index.html → open with Live
                                           server

Javascript in Browser } - // add always end of
                              body section in htmls

html code

```
<body>
    :
    :
    <script> console.log('Hello world');
    </script>
<body>
```

//comment log into console

par on o/p } , console
